

Vaccinated? Life in the New Normal

People who have been vaccinated can still get infected with coronavirus, and its infectious variants.

There are many infectious variants, known and unknown!

Don't take a chance.

If you get infected again, **everyone** including your loved ones is at the risk of exposure and infection.

Those infected again, despite vaccination, can still get severe diseases in a few cases.

People who have been vaccinated still need to follow COVID Appropriate Behaviour!

Wear a Mask properly, and consistently

Perform Hand Hygiene regularly and avoid touching your face

Maintain Physical Distancing from others

2 meters / 6 feet

Why do I need to follow COVID Appropriate Behaviour if I have been vaccinated?

As the vaccination coverage is still low, with the majority of the population not protected as yet, there is still a higher risk of transmission of infection in the community, hence wearing of masks properly and consistently is still recommended.

Even if you are vaccinated, it is advisable to avoid Close Contact, Crowds, and Crowded places.

- When all are vaccinated, you can meet with family and friends and 'go out'.
- Prefer outdoor seating and interactions to minimise exposure.
- Keep rooms ventilated well and prefer to wear a mask when indoors with others.
