

Do I really need a Coronavirus Vaccine?

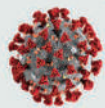

Should I take the COVID Vaccine at all?
I lead a 'safe' lifestyle and am careful!

You may think you are safe, however you interact with many people through the day, whose infection status you wouldn't know about.

Threat

The pandemic is in its
2nd wave
Maybe there will be a
3rd or **4th** wave

Everyone including you and your loved ones are at risk of exposure and infection

Prevention

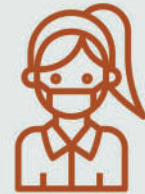

Hand Hygiene

Physical Distancing

Mask

Vaccine

- A coronavirus vaccine provides you **protection against severe disease** even though it may not prevent you from getting infected.
- Even if you get infected after vaccination, you will **most likely get just mild illness**

COVID Appropriate Behaviour along with vaccine is the most effective weapon against coronavirus and all variants
